Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Monica is interested in finding a treasure but the key to opening is to get the sum of the main diagonal elements and secondary diagonal elements.

Write a program to help Monica find the diagonal sum of a square 2D array.

Note: The main diagonal of the array consists of the elements traversing from the top-left corner to the bottom-right corner. The secondary diagonal includes elements from the top-right corner to the bottom-left corner.

Input Format

The first line of input consists of an integer N, representing the number of rows and columns.

The following N lines consist of N space-separated integers, representing the 2D array elements.

Output Format

The first line of output prints "Sum of the main diagonal: " followed by an integer, representing the sum of the main diagonal.

The second line prints "Sum of the secondary diagonal: " followed by an integer, representing the sum of the secondary diagonal.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3
1 2 3
4 5 6
7 8 9

Output: Sum of the main diagonal: 15
Sum of the secondary diagonal: 15

Answer

```
import java.util.Scanner;
class Main{
   public static void main(String[]args){
      Scanner in = new Scanner(System.in);
      int a=in.nextInt();
      int sum=0;
      int[][]n=new int[a][a];
      for(int i=0;i<a;i++){
         for(int j=0;j<a;j++){
            n[i][j]=in.nextInt();
         }
      }
      for(int i=0;i<a;i++){
         for(int j=0;j<a;j++){
            if(i==j){
               sum=sum+n[i][j];
            }
         }
```

```
        }
        int b=0;
        int c=a-1;
        int sum1=0;
        for(int i=0;i<a;i++){
            sum1=sum1+n[b][c];
            b++;
            c--;
        }
        System.out.println("Sum of the main diagonal: "+sum);
        System.out.println("Sum of the secondary diagonal: "+sum1);
    }
}
```
